

What the analysts are saying about MPLS with CoS over DSL

“DSL access clearly has become a mainstream business network access technology. As latency-sensitive business applications proliferate, the need for prioritizing data traffic over DSL is obvious. New Edge is offering businesses an opportunity to extend MPLS CoS over lower-priced DSL.”

Erin Dunne

Director of Research Services
Vertical Systems Group

“I think a solution that fills the gap between DSL and T1 pricing will resonate well with organizations in various industry sectors that want to upgrade their DSL networks but cannot see enough value from a T1 because they simply cannot afford it. Recent Aberdeen research shows that businesses in various industry sectors want the ability to prioritize network traffic and achieve a high level of application performance without actually spending a ton of money. A solution like this is not just for businesses that do not have money to spend on T1. It will resonate well with those that do but also want maximum value out of their investments.”

Bojan Simic

Communications Research Analyst
Aberdeen Group

“What New Edge is offering is a major step towards a seamless telecommunications world in which networks transcend individual technologies. As such, it opens a host of market opportunities for New Edge and its partners in the RBA [Retail Broadband Alliance] as well as offering smaller users unprecedented capabilities.”

Max Engel

Industry Analyst
Frost & Sullivan

“SMBs are expected to spend roughly \$74.7 billion on traditional software and mobile applications this year, which requires not only bandwidth but also the ability to prioritize and classify services, whether it is an application, video, or other data service. New Edge Networks' breakthrough Class of Service over DSL solution greatly meets this growing need and further gives SMBs 'enterprise-like' options and the ability to compete on a greater scale against enterprise businesses. This industry-first solution is not only attractive because of its lower than T1 cost, but also because of the ability to provide the performance SMBs need to work effectively and compete.”

Stephanie Atkinson

Managing Partner & Principal Analyst
Compass Intelligence

“This type of solution could be game-changing for the industry. It's one of those few offers that really does make headway in the industry and does something new that hasn't been out there before.”
